

## How to Administer EyeDetect Tests in a Different Language

1. Launch **EyeDetect**
2. Select **“Test” > “Create”** or select the **“Test Wizard”** button
3. Select the **dropdown** at the top to choose the test language
4. After changing the language, EyeDetect will automatically populate all of the tests that you have in that language
5. Select the test you want and enter the Test Subject ID and Test Subject Name
6. Select **“OK”**

Note: this will enable you to administer an EyeDetect test in a different language than the user interface.

### For Example:

In the image below, **English** was selected. Consequently, the test list shows all English tests that are assigned to this subaccount.

English

Test ID	Test Name
D000001T01	Drug use in the past 90 days
